

TORINO

T10 Back Brace

Product Description

The Torino T10 Back Brace combines a modern, sporty design with effective lumbar support. Made from high-quality knitted elastic fabric, it conforms to body contours while remaining lightweight and breathable. The 10-inch posterior panel features reinforced stays that stabilize the lumbar region and help keep the spine in the correct position when worn. Ribbed elastic side pulls allow a customized fit, and the firm, non-elastic front panel includes a smooth, non-abrasive closure for secure adjustment.

This brace provides controlled lumbar support, reduces muscle strain, and assists in maintaining proper posture, making it suitable for both preventive use during activity and supportive use during recovery from injury.

Indications

- Lumbago, lumbar strain, or ligamentous sprain
- Degenerative disc disease or mild disc herniation
- Postural weakness, lumbar instability, or mild spondylosis
- Post-operative, post-traumatic, or preventative lumbar support during activity

Key Features

1. **10-inch back panel with reinforced stays** – for support and rigidity
2. **Knitted elastic and ribbed components** – provide dynamic support
3. **Firm front panel with gentle, easy-to-adjust closure** – ensures a secure and comfortable fit
