

## Product Description

The Torino T7 Knee Brace provides advanced compression and patellar support for improved knee comfort and stability. Constructed with Flexknit 3D fabric, it delivers medical-grade compression (20–30 mmHg) to enhance circulation, reduce swelling, and keep the knee cool and dry. The contoured stabilizing pad cushions the kneecap and helps maintain proper alignment when worn, supporting safe movement and reducing the risk of injury. Lightweight, rigid leaf-spring side stays offer gentle lateral stabilization without restricting natural motion, while the vented back panel promotes airflow and flexibility.

## Key Features

1. **Flexknit 3D fabric** – provides dynamic compression and breathability
2. **Stabilizing pad** – supports and aligns the patella
3. **Medical-grade compression (20–30 mmHg)** – promotes circulation and reduces strain
4. **Vented back panel** – enhances comfort and ventilation
5. **Removable side stays** – maintain shape and support
6. **Easy-pull design** – for simple, secure application

## Indications

Recommended for conditions benefiting from compression and patellar stabilization, including:

- Patella Tendinitis (Jumper's knee)
- Chondromalacia Patella
- Mild sprains or strains
- General knee pain and instability
